**Auto Industry Now Also Showing Keen Interest in Pyrolyx Technology after Successful Compound and Tire Tests**

Munich, June 26, 2013

Pyrolyx AG – the environmental technology company specializing in the sustainable recovery of raw materials from end-of-life tires – has received positive confirmation from the industrial sector of the high quality of Pyrolyx Carbon Black for use in tire production.

Following extensive tests, international tire manufacturers have verified the usability and quality of Pyrolyx Carbon Black. This was the first time that manufacturers had produced tires industrially with the addition of Pyrolyx Carbon Black. As a result, not just tires for cars, lorries, and the industrial and agricultural sectors but also other industrial rubber items can now be manufactured using carbon black made by Pyrolyx. This is a major milestone for the company as planning continues for the commercial production of Pyrolyx Carbon Black for the tire and rubber industries.

In addition, presentations given to prominent automakers have gone extremely promisingly. Following these initial talks, manufacturers are very interested in Pyrolyx technology. It's now certain that this method can further improve the environmental impact of the automotive industry. And from 2015 it will also help meet the new targets contained in Germany's end-of-life tire regulations (which are based on European Directive 2000/53/EC on end-of-life vehicles).

## Pyrolyx

Pyrolyx AG is a Munich-based company specializing in practical and applied research into environmental technology.

The company has developed a unique process that enables valuable raw materials such as carbon black to be made from commercial rubber granules produced from for instance end-of-life tires. Carbon black is used to manufacture tires and various industrial rubber items. The Pyrolyx process enables a sustainable closed recycling loop for the first time for the reuse of end-of-life tires.

Pyrolyx owns all the intellectual property rights to Pyrolyx environmental technology and has various patents pending concerning the industrial production of carbon black. Pyrolyx AG is quoted on the Primary Market of Düsseldorf Stock Exchange (ISIN DE000A0MFXR8).
